📄 **Ternary Operator in JavaScript**

The value to be returned if the condition returns True.

condition ? value if true : value if false;

The condition to be tested.
Should return either True or False.

The value to be returned if the condition returns False.

- The **condition** is the expression whose value determines which value is used.
- The **value after the ?** is returned if the condition returns true.
- The **value after the :** is returned if the condition returns false.
